

# PEACE OF MIND TECHNOLOGY

## *Collaborative Workspaces*

### CLIENT

Peace of Mind Technology (POMT) is a specialist workplace technology firm at the forefront of convergence between audio visual and information technology. POMT approached nsquared, wanting to work together to create a digital table solution that would help POMT to show their clients how multi-user technology can improve their workspace.

### CHALLENGES

[1] The hardware must demonstrate the full potential of multi-user tabletop software.

---

[2] Incorporating the Samsung SUR40 into a booth setting.

---

*“The team at nsquared has helped us create a great leading edge experience with their digital tabletop solutions.”*

**JEREMY POLLAK, PEACE OF MIND  
TECHNOLOGY SYDNEY, AUSTRALIA**

## SOLUTION

nsquared solutions supplied POMT with a Samsung SUR40 digital table with our suite of business applications for their new in-house show space.

The SUR40 has been incorporated into a booth setting, giving clients hands-on experience with the technology. nsquared's contribution to this project has helped POMT demonstrate the possibilities of new collaborative workspaces.

POMT uses the nsquared apps to show the full potential of multi-user tabletop computing. POMT's business suite includes: nsquared attractor, nsquared presenter, nsquared thoughts, nsquared documents and nsquared schedules.

nsquared also assisted the POMT team to create 'byte tags' that can be recognised by the SUR40's vision system. These tags have been added to the company business cards for use with nsquared schedules. By placing a card on the SUR40 a POMT team member can bring up his or her company calendar on the tabletop.

## BENEFITS

[1] Demonstrates cutting edge collaborative computing technology.

---

[2] Byte tags make scheduling meetings with clients and colleagues a breeze.
